Abstract

...

Keywords: Autism, neurodevelopmental disorder, perception.

1. Introduction and preliminaries

Some basic deficits such as lack of attention and failure to orient the names, often appear within the 1st year of life while other malfunctions such as deficits in social interaction, imitation, responding to the others' emotional cues, and face recognition are often manifested later on, within age 2 to 3 [1, 2, 3, 5, 7, 8]. Many of the social deficits in autism occur due to the inability to perceive and process information from faces [6]. These deficits are not typically diagnosed until about the age 3 [4].
